TI Plant-derived and synthetic phenolic compounds and plant extracts,
effective in the treatment and prevention of chlamydial infections

AB The invention relates to natural and synthetic compds., plant exts. and
compns. containing them and mixts. of these in the treatment and/or prevention
of a chlamydial infection. Medicinal prepns., food additive compns. and
functional foodstuffs can be prepared from the plant-derived phenolic
compds. and synthetic compds. and plant exts. The direct antichlamydial
effect of some plant-derived and synthetic phenolic compds. and their
mixts. (e.g. quercetin, morin daidzein, and gentistin at a concentration of 50
µM) was studied on chlamydia pneumoniae.

L41 ANSWER 3 OF 10 HCAPLUS COPYRIGHT 2007 ACS on STN
 TI Method to enhance antioxidant activity of food and antioxidant activity
 enhancers containing carnosine and natural antioxidants
 AB Antioxidant activity of foods is enhanced by adding carnosine (I) or its
 prepn. and flavonoids, carotenoids, polyphenols, or retinoids to food.
 Antioxidant activity of I-containing foods is enhanced by adding flavonoids,
 carotenoids, polyphenols, or retinoids or foods containing the above natural
 antioxidants. Antioxidant activity of foods containing flavonoids,
 carotenoids, polyphenols, or retinoids is enhanced by adding I or its
 prepn. Pork loin was soaked in red wine, massaged for 3 h, sliced, and
 roasted. This treatment significantly reduced. The roasted pork showed
 enhanced active O scavenging effect. Soup containing pork extract, tomato
 juice,
 and wine retarded autoxidn. of linolic acid.

L41 ANSWER 5 OF 10 HCAPLUS COPYRIGHT 2007 ACS on STN
TI Process for removing light absorbing compounds from epidermal plant cells
AB A process is disclosed for harvesting light absorbing compds. from the epidermal cells of a plant. The plant is subjected to artificial light having wavelengths in the range of 260 to 400 nm. The plant is ground to form a slurry and an enzyme is added to the slurry to breach the walls of cells in the plant to free the light absorbing compds. A solvent added to the slurry exts. the light absorbing chems.

L41 ANSWER 6 OF 10 HCAPLUS COPYRIGHT 2007 ACS on STN
TI Photometric determination of flavones in citrus juice and peel products
AB A photometric method for determination of flavones in citrus juice and its peel products was studied. Flavones were extracted with a diluted alkaline solution, allowed to react with diethylene glycol to produce a color, and determined by measuring the absorbance at 420 nm. Interference of the food matrix was eliminated through background deduction. The detection limit was 1.1 mg/100 g, the RSD was 1.19-4.93%, and the recovery was 100.2 ± 3.1%.

L41 ANSWER 7 OF 10 HCAPLUS COPYRIGHT 2007 ACS on STN
 TI Plant Flavonoids, Especially Tea Flavonols, Are Powerful Antioxidants
 Using an in Vitro Oxidation Model for Heart Disease
 AB Flavonoids, commonly occurring antioxidants in foods, have been compared
 in a dose-response manner with vitamins C and E and β -carotene and
 found to be powerful antioxidants using an in vitro lipoprotein oxidation
 model. This model simulates the oxidation of low-d. lipoproteins, which
 results in atherosclerosis. Of the flavonoids and flavonoid-related
 compds., flavonols found in tea are the most powerful natural
 antioxidants. These results provide a mechanism for the beneficial
 epidemiol. effect of dietary flavonoids on heart disease.

L41 ANSWER 8 OF 10 HCAPLUS COPYRIGHT 2007 ACS on STN
 TI Flavonoids for protection of cells against chemically active species of
 oxygen, their extraction from plants, and their use in cosmetics
 AB Flavonoids are extracted from plants for use as agents to protect cells
 against chemical active species of O. Cosmetic compns. contain these
 protective agents. (-)-Epigallocatechin gallate (I) was prepared by extraction
 from dry leaves of Camellia sinensis L. Galangin was extracted from dry
 alpinia officinarum Hance roots. In a photohemolysis assay, a 1:1 mixture
 of I and galangin gave a half-hemolysis time of >2000 min (compared with
 32 min for controls). Each, alone, gave values of 400 and 1800, resp.

L41 ANSWER 9 OF 10 HCAPLUS COPYRIGHT 2007 ACS on STN
 TI Structure-activity relationship of flavones as growth inhibitors of the
 navel orangeworm
 AB A series of flavones with widely varying degrees of substitution was fed
 to neonate larvae of the navel orangeworm (Amyelois transitella). Growth
 of navel orangeworm larvae was inhibited by 5-methoxyflavones and flavone
 itself; 5-hydroxyflavones did not inhibit growth. Host resistance of
 citrus fruit to attack by the navel orangeworm might be due to the

5-methoxyflavones that occur in the peels.
